

Cooking oil special vehicle

***1. The tank volume is 42 cubic meters, with a short wheelbase and light curb weight for the tank truck. The front and rear load designs are reasonable, ensuring smooth driving with minimal bouncing.**

***2. The tank body is made of polished plates from domestic leading manufacturers, and its structural design, weld grinding, and inner surface meet food-grade smoothness requirements.**

***3. All welding of the cylinder adopts automatic welding equipment, resulting in well-formed welds, minimal cylinder deformation, clean discharging, and excellent performance.**

***4. The valves and sealing gaskets used in the tank truck are all food-grade materials, and the truck comes with relevant inspection certificates and quality inspection reports upon delivery.**

***5. Optionally, 50mm polyurethane foam material can be installed for excellent insulation performance, suitable for long-distance transportation requirements of liquid food tank trucks such as edible oil.**
